I can post the data report. I think AP reported it and also Jackie was concerned. It is probably worth talking about.

Subject: San Jacinto data for the discolored area on the cap

David,

We also have a data package (without validation memo) for the discolored area on the cap that was sampled. The results are below levels of concern, but it does not look like this information was ever picked up in the data summaries. Should the data summary be updated to include this? Our

recollection was this was reported separately, and it was noted in one of the Sit Reps or some other report.
